

Practical Lab Exercises

Lab- Javascript Prt 1 (Basics)

Web Programming (F28WP)

Introduction

In this lab, you'll further develop your understanding of Javascript.

1.1 Handling Events

Write a JavaScript function to create an event handler that catches the "click" event over some content in a page and changes some style property of that element. Add some means of invoking the function to a page. Test your page is able to install the event handler when you invoke it and prove the event handler is triggered by appropriate events of its type after it gets dynamically installed.

2.0 Practice Exercises

Work through the following exercises to develop your understanding of Javascript and the API

<https://www.w3resource.com/javascript-exercises/>

Note: Attempt to solve the problems first (before looking at the solutions).
