

# Notes- Introduction

Web Programming (F28WP)

---

## Introduction

Supplementary notes to complement the lecture material for web programming.

### Check List

Ensure you are able to answer the following questions:

- Checked the timetable and know where the lecture rooms and labs will take place
- You have reviewed the course syllabus
  - The topics and the aims of this course
- Understand the assessment
  - Coursework 50% and Digital Exam 50%

This week you'll need to organise yourself into a team for the coursework. The coursework is for the duration of the course, and is a substantial piece of work that demonstrates your understanding of the subject material (see the coursework specification details).

The team must be between 3-5 people.

You should start to get familiar with using GitHub (e.g., checking in new files, making updates to existing files, tracking bugs, features, and working efficiently and effectively with others).

While you'll manage your project and work on GitHub, your final submission needs to be done to Vision (see coursework specification details).
